

What is important at Admission?

This infographic uses HoNOS data from adult mental health services from July 2024 to June 2025. For more information see the [full report](#) and refer to the accompanying [user guide](#).

This report uses HoNOS (Health of the Nation Outcome Scales). HoNOS is a simple measure used in adult services. It has 12 items scored from 0 to 4 where 0 is no problem and 4 is a serious problem.

Average number of items which are clinically significant on admission

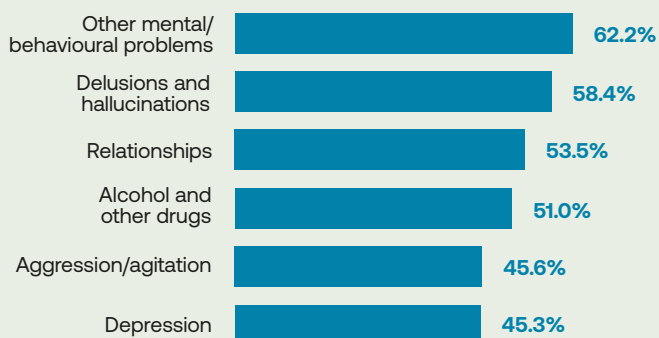

Clinically significant is when the item has a score of 2 to 4
(mild to severe problems).

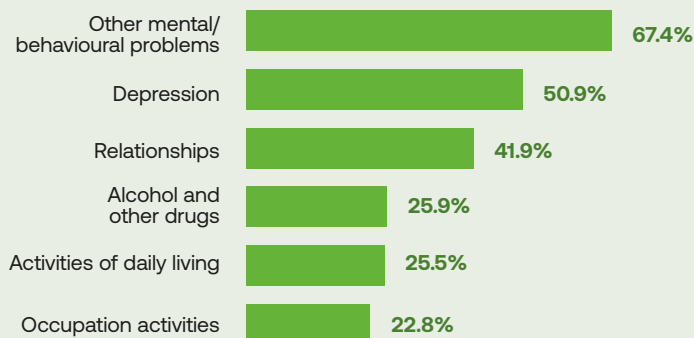

Top 6 items with highest percentage which are clinically significant on admission

Percentage with a items score of 2 to 4 for HoNOS.

Inpatient

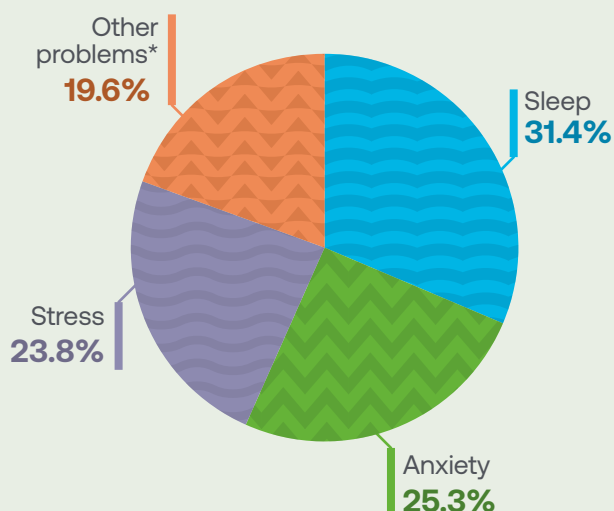

Community

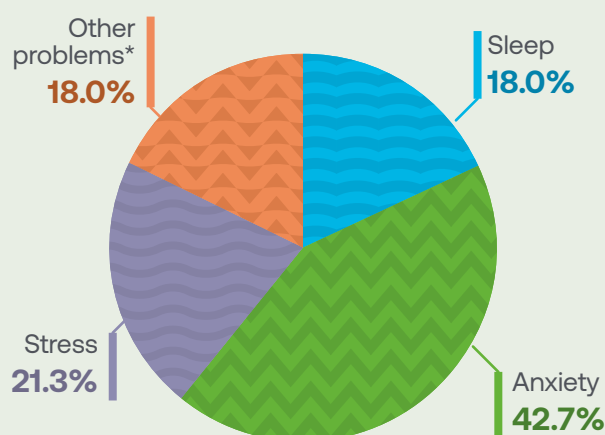

Other mental/behavioural problems on admission

Of those with a score of 2 to 4 for other mental/behavioural problems.

Inpatient

Community

* Other problems include categories where numbers are small: Phobic, Obsessive-compulsive, Dissociative, Somatoform, Eating, Sexual and Other.
